## Foreword

# Molecular Diagnostics Training School 2024

# Digital Pathology & Image Analysis Training School 2024

From Prof. Renate Kain

I would like to welcome you all to the sixth **Molecular Diagnostics Training School** and the fifth **Digital Pathology & Image Analysis Training School**, both to be held as hybrid events this year. The school is supported by the **Austrian Society of Pathology**, the **Nottingham Molecular Pathology Node** and the **European Microscopy Society**.

Established in co-operation with the University of Nottingham, the Molecular Diagnostics Training School and Digital Pathology & Image Analysis Training School have developed into a highly successful joint venture. For this year, we have introduced – thank you for your constructive feedback – a few changes to our program. Covering ever-increasing and rapidly evolving fields, both Training Schools have now become too short to give all the novel and exciting topics the space they deserve. We have therefore decided to cover the basics of molecular diagnostics, digital pathology and image analysis in pre-recorded lectures that provide the foundation for those of you who have little or no experience in either biological background or technical/methodological approaches. These pre-recorded lectures will be available to you before the beginning of the Training Schools and are the basis for the specialized lectures on recent developments in technological approaches as well as worked examples.

As for the **Molecular Diagnostics Training School (MDTS)** I would like to begin with the following statement:

*Molecular Diagnostics is the foundation for precision medicine.*

The MDTS is aimed at persons who may have little experience with molecular diagnostics but also those who are looking for a refresher course or want updates on novel developments. The training school will introduce you to common concepts which underpin the tests, including the panoply of tests which are currently used in diagnostic practice. We will also discuss the importance of getting good template and of having robust quality assurance for your tests. The school will also cover new methodologies such as digital spatial profiling and it will conclude with an overview of current applied molecular diagnostics in a variety of different organ systems.

And an apt introduction to our **Digital Pathology & Image Analysis Training School** is the statement:

*Digital Pathology and Image Analysis: Prepare, the future is here!*

The DP&IATS is aimed at both, Trainee and Consultant Pathologists and non-clinical scientists/computer experts, who may have some experience with digital pathology and platforms, but are looking to deepen their knowledge. Thus the training school aims at bringing together histopathologists and computational scientists to foster mutual understanding and collaboration. As digital technologies are transforming histopathology diagnosis and research, the training school will outline some of the basic challenges encountered during image analysis and introduce the concepts of stereology and segmentation analysis. In view of the rapid need for integration of image analysis with molecular diagnostics development, we shall explore both the spatial reasoning of imaging and assessment of multiple biomarkers on digital platforms.

We have a world class faculty to deliver the teaching materials and to deal with any questions.

I hope you enjoy and benefit from the two training schools. We will not make you into a card-carrying molecular biologist in these three days, and can only hope that the basic language of image analysis is no longer alien and the clinical perspective contextualized after the three-day DP&IATS, but if you come away agreeing with my introductory statements, then the school will have achieved its aims!

Best wishes,

**Renate Kain**
